Treatment of Gates

All Tongue and Grooved Gates should not be treated with a water based product. They are made from Kiln Dried timber, which is stored and assembled in a dry store and assembled in a dry workshop. Once KD timber comes into contact with moisture it will expand and is likely to distort and twist, which may force the joints apart. We recommend 3 coats of solvent based treatment. See page 5 for our rates on the first coat. It is the responsibility of the customer to make sure their gates are protected from weather damage as New Forest Fencing & Gates Ltd will not accept any liability for the distortion, bow or twist of these products where our recommendations have not been followed.

We hope you find your requirements without trouble, however, should you need any assistance please do not hesitate to contact our Sales Team on 023 8073 3442 or email info@newforestfencing.co.uk

At New Forest Fencing we select our suppliers on the basis that their timber is purchased from well managed forests. Our company will give preference to suppliers who demonstrate a commitment to progressive improvement in environmental management. This is not necessarily an expensive alternative and we constantly monitor our prices to ensure you, the customer, receive quality at competitive prices.

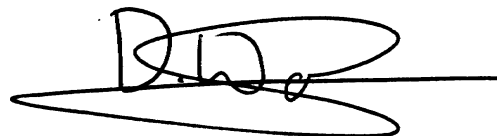

We offer pressure treatment in a natural light green colour - we particularly recommend this for treatment of all posts. We also offer a water-based treatment in light green.

Although we endeavour to stock the majority of products in this brochure, it is not a stock list. Therefore, to avoid disappointment, please telephone to ensure that your requirements are in stock.

Should you require an estimate for supply and erect, please contact us on 023 8073 3442 or email info@newforestfencing.co.uk
